Profile Summary

Backend-focused Full-Stack Developer with 6 years of experience building web applications. I mainly work with Node.js, creating APIs and backend systems that are reliable and easy to maintain. I've worked with both relational and document databases, and have experience building real-time features using WebSockets and handling video streaming.

On the frontend side, I'm comfortable using React and Next.js when needed, but my main focus is on backend development and system design. I enjoy solving practical problems and building things that just work well end-to-end.

Education

Bachelor of Computer science

Branch: Software Engineering

Institute/University: National University of Skill of Tabriz

Tabriz, East Azerbaijan, Iran

2019 - 2023

GPA: A

Work Experience

Backend Developer

Fitclub.ir

Iran

2025 - 2026

Tasks and Achievements

Worked at FitClub.ir as a Backend Developer, designing and implementing backend services for video processing and streaming, dynamic PDF generation and rendering, and web scraping. Additionally, identified and resolved security vulnerabilities to enhance service security.

Full-Stack Developer

IELTS 6.5

Projects

KwSense – SEO Analytics & Rank Tracking Platform

2025

KwSense is a web-based SEO tools platform that helps users analyze websites, monitor search engine performance, and track keyword rankings over time. It provides insights for both personal websites and competitors to improve visibility and search performance.

Sanak – Gamified Learning Platform for Children

For: Mr. Navid Hatami

2023

An educational platform that helps schools and teachers engage students through game-based learning, making education more interactive and enjoyable.

Worked as Backend Engineer and system designer, building a data-intensive system optimized for near real-time queries and student progress tracking.

Tech stack: Node.js, PostgreSQL, Redis, S3-compatible storage

Link: <https://s4k.ir>

Befresto, online supermarket store and management system

May 2023

An online supermarket platform focused on simplifying inventory management and improving the customer shopping experience. Included barcode-based inventory tools for staff and a clean, guided UI for online ordering and delivery.

Despite strong early traction, the project was discontinued after 4 months due to financial constraints.

Tech stack: Next.js, PostgreSQL, MeiliSearch, S3-compatible storage

Additional projects available on my Parscoders profile.

Worked on multiple freelance projects through platforms such as Parscoders and Ponisha, mainly focused on web crawlers and data scraping solutions for platforms like Divar, Sheypoor, Instagram, and LinkedIn. Some projects are available on my Parscoders profile.

Selected Projects

- Print shop e-commerce system with a web-based design editor (Node.js, PostgreSQL, S3, Next.js, Konva.js, Stripe)
- Vitport – social media advertising platform with Instagram ad verification and scraping system (Node.js, Express, Redis, MySQL, Docker)
- Service promotion platform similar to Divar for a specific niche market (Node.js, Express, Bull Queue, MySQL, Redis, Sharp, Docker)
- NiniYeto – WordPress e-commerce store for imported goods integrated with Torobo.com
